TECHNOLOGY STACK – LegalEase AI

Date: 29/09/2026 | TeamID:SWTID-2026-5113| ProjectName:LegalEaseAI | MaximumMarks: 2 Marks

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	Streamlit	Used to build the user-friendly frontend for document input, generation, editable preview and download. The project specifically uses Streamlit for user interaction, responsive layout, preview and document downloads.
2	Backend / Server-Side	Python + FastAPI + Uvicorn	FastAPI handles API requests and exposes the /generate endpoint. Python is the main programming language, while Uvicorn is used to run the FastAPI backend server.
3	Database / Data Storage	No database specified	The supplied LegalEase project document does not specify MySQL, MongoDB, PostgreSQL or another database. The project instead describes request-based processing and document export.
4	Cloud / Hosting / Deployment	Local deployment; Render / Railway / Deta / Streamlit Community Cloud / Fly.io / VPS (options)	The documented implementation focuses on local deployment using FastAPI and Streamlit. The project also lists these cloud/deployment options for future or supported deployment.
5	Version Control & CI/CD	Not specified	The supplied LegalEase document does not identify a version-control or CI/CD technology such as GitHub, GitLab or Jenkins. Therefore, no unsupported tool is added.
6	Third-Party APIs / Other Tools	Google Gemini 1.5 Pro API, python-docx, FPDF, Pillow, Requests, python-dotenv	Gemini 1.5 Pro generates legal document content. python-docx formats DOCX files, FPDF creates branded PDFs, Pillow supports image/logo handling, Requests supports HTTP requests, and python-dotenv manages environment variables such as the Gemini API key.

Source basis: LegalEase project documentation. Technologies are limited to those explicitly specified in the supplied project material; unspecified components are marked accordingly.
