Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-5113
Project Title	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

LegalEase uses Generative AI to simplify legal document creation by providing customizable, accurate, and editable templates. Users can generate employment contracts, lease agreements, NDAs, and other documents from inputs such as parties, dates, and key terms. The platform combines FastAPI, Streamlit, and Gemini AI, with editable previews, branding, and export to PDF, DOCX, and TXT.

Project Overview

Objective	Simplify legal document creation for entrepreneurs, professionals, and individuals by using Generative AI to generate structured legal documents from user-provided details.
Scope	Generate, preview, edit, format, and export legal documents such as contracts, NDAs, lease agreements, and employment documents using a Streamlit frontend, FastAPI backend, and Gemini AI integration.

Problem Statement

Description	Creating professional legal documents can be complex for users without a legal background. LegalEase addresses the accessibility gap by simplifying document creation and presenting structured, editable legal content.
Impact	The solution aims to improve accessibility and understanding of legal content, reduce complexity for basic document creation, and provide professionally formatted outputs for common use cases.

Proposed Solution

Approach	Use Google Gemini 1.5 Pro through a FastAPI backend to generate structured legal content from document type, parties, terms, and effective dates; provide a Streamlit interface for preview, editing, and export.
Key Features	- AI-powered legal document generation - Editable text preview - Export as TXT, DOCX, and PDF - Custom branding with logos/fonts and terms tables - Styled HTML preview - Secure handling of sensitive user data

Proposed Solution - Key Features (continued)

- FastAPI POST /generate endpoint for document generation
- GeminiDocumentGenerator for AI integration
- User inputs for document type, parties, terms, and dates
- DOCX formatting with logo, headings, tables, and footer
- PDF formatting with logo, headings, bullet-style terms, and footer
- Local deployment with FastAPI + Streamlit; future cloud deployment options

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware	Computing resources	Not specified in project document
Memory	RAM	Not specified in project document
Storage	Disk space for application, generated files, and logs	Not specified in project document
Software	Frameworks	FastAPI; Streamlit
Software	AI / API integration	Google Generative AI SDK; Gemini 1.5 Pro
Software	Libraries	Python-docx; FPDF; Pillow; requests; python-dotenv
Development Environment	Runtime / setup	Python 3.10+; pip; virtual environment; .env for Gemini API key
Data / Inputs	User-provided fields	document_type, parties, terms, effective dates; no external dataset specified

Source basis: LegalEase project documentation. The project document specifies the software stack, workflow, features, inputs, and deployment approach; hardware specifications and an external dataset are not specified.
